

## **Instructions for Denture and Partial wearers**

After your surgery to remove teeth and place the appliance, it is normal to be uncomfortable. Taking the prescribed medication is important even if initially there is no pain.

It is important to keep the appliance in for the first 24 hours or until you return to our office. At your appointment we will adjust any sore areas and instruct you on the care of your appliance.

It may take one week to one month for you to feel comfortable with the new appliance. During that time it is important to wear it 24 hrs, removing it only to clean. Any time the appliance becomes sore or you feel a need to remove it, you should call the office to set up an appointment for an adjustment. We will be glad to see you on a daily basis, if necessary needed.

Please call if you have any questions or concerns. (978-462-9611).
